Using AI Responsibly - Do's and Don'ts

Using Enterprise-Trusted and Public Artificial Intelligence (AI) Tools Responsibly

Artificial Intelligence **(AI) creates exciting possibilities** to **empower our employees**, making every day work smoother, smarter, and more rewarding. It's not just about efficiency—it's about freeing up time to focus on the work that truly matters, sparking creativity, and building new skills. At the same time, **AI helps us deliver even better experiences for our clients** and drives innovation across the organization. Whether we're adopting trusted third-party solutions or building our own, it's essential that we **use these powerful tools thoughtfully and responsibly.** As we embrace the benefits of AI, we need to continue to uphold and adhere to our Information Security Policy and Standards and Global Privacy Policy.

Here's some valuable information to help get started.

What Is the Difference between Public and Enterprise-Trusted AI Tools?

Public Tools	Enterprise-Trusted AI Tools
Public AI tools, such as the free **consumer versions** of ChatGPT, Claude, and Gemini can be accessed through personal, user-created accounts and **operate outside New York Life's secure ecosystem.** These tools lack the protections of New York Life's company-approved systems, so	In contrast**, Enterprise-Trusted AI tools**— such as Claims Genie, Service Sage, Microsoft 365 Copilot (M365 Copilot), and ChatGPT Enterprise —have been thoroughly reviewed and approved for company use. **These tools operate within New York Life's secure ecosystem**, and offer enhanced

entering sensitive company information, such as proprietary data or Personally Identifiable Information (PII), **can expose our information** to the large language model (LLM) provider, who may use it to train future models. New York Life encourages curiosity and exploration with AI tools. **Just remember to keep sensitive details—such as names, email addresses, our company name, or other types of PII—out of your prompts to protect privacy.**

safeguards, including firewalls and strict access controls, to ensure sensitive information is protected and compliant with company policies.

What is an easy way to note the difference between Public and Enterprise-Trusted AI tools?

📬 Analogy: Postcard vs. Sealed Envelope

AI Tool Type	Analogy	What It Means
Public AI Tools **Enterprise-Trusted AI Tools**	📮 Postcard	- Anyone along the way might see what you write - Not secure for sensitive information - Exercise caution before entering information
Enterprise-Trusted AI Tools	✉️ Sealed Envelope	- Protected from external views - Enhanced safeguards - Generally, you may enter sensitive information, but you

		should adhere to the principle of data minimization*

As further explained in the Do's and Don'ts below, appropriate use of data and other privacy considerations must still be considered when using Enterprise-Trusted AI tools. If you're unsure about using a specific tool, contact AI@newyorklife.com.

Protecting company information is our shared responsibility. Follow these guidelines when using AI tools:

Do's - General Guidelines

- **Ensure you are accessing the correct site for the tool.** Always double-check the URL spelling, look for subtle misspellings or extra characters (e.g., chatgpt.com vs chatgpt.ai-.xyz). Make sure the site uses **HTTPS** (look for the padlock icon in the address bar), search for the AI tool using a reputable search engine and bookmark the site for future reference.
- **Check the facts:** AI-generated responses may be inaccurate or contain outdated, biased, discriminatory, or copyrighted information. Always refer to a second source to ensure credibility and carefully review outputs for quality and accuracy.
- **Use AI as a supplement**: It is not a replacement for critical thinking or expert advice. It is a good starting point for idea generation and/or drafting
- **Maintain professionalism:** Use appropriate language and tone in all

Do's - Enterprise-Trusted Tools

- **Handle with care:** You generally may upload PII/Health Information into enterprise-trusted tools (e.g., ChatGPT Enterprise, M365 Copilot), provided it is for a legitimate business purpose and complies with applicable corporate policies and standards.
- **Apply the principle of data minimization***: Limit the inclusion of confidential or sensitive information to only what is required for the specific business use. If using the data is necessary, ensure sensitive information is masked. For example, display only the last 4 digits of a social security number.
- **Keep data current:** Use high-quality, accurate information to improve AI output and update it regularly to maintain reliability and relevance.
- **Check if approval is required:** If you create a custom AI assistant for your own personal use (such as a Copilot Studio Agent or a Custom GPT), before integrating it into a business process that has operational,

interactions.

- **Clarify prompts:** Use clear, specific language prompts to achieve meaningful results. Refer to the company's prompt guidelines: *Tips to prompt like a pro!*
- **Be transparent:** Use your judgment to inform others when content is AI-assisted—especially when facts, data, or originality matter, such as client-facing or legal documents.
- **Be aware of privacy risks when using public AI tools:** Remember, public tools may store data, which can associate any information you submit with New York Life.
- **Use secure and reputable websites:** Only access public AI tools through secure and reputable websites and do not download unknown applications. If you're unsure about using a specific tool, contact AI@newyorklife.com.

Don'ts– General Guidelines

- **Input sensitive data into public AI tools:** Never enter personal, financial, PII, Health Information , or information classified as Internal, Confidential, or Highly Restricted.
- **Rely solely on AI results for decisions:** Always consult a human expert (e.g., subject matter expert in that field) for high-stakes or legal matters.
- **Violate Intellectual Property rights:** Avoid using it to reproduce or adapt copyrighted material without permission.
- **Bypass security protocols:** Always follow our company requirements when accessing external AI tools and regulatory, or financial implications, it must be reviewed by the AI Risk Review team. **For more information about what might require a review, reference the AI Risk Review Hub.**

Q&A

***What does data minimization mean?**

If you are creating a marketing GPT, uploading a file that includes customer names and mailing addresses may be appropriate, but including Social Security numbers would be unnecessary and should be avoided. Practicing data minimization helps mitigate legal, regulatory and reputational risks.

Don'ts – Enterprise-Trusted Tools

- **Overshare:** Use your judgment and limit sharing of custom GPTs to those who have a need to access them.
- **Use for personal tasks:** Keep work-related and personal use of AI tools separate.

websites as described in New York Life's Acceptable Use Standard.

- **Conduct prohibited activities**: Never use AI to circumvent legal or regulatory requirements. Generally, if a human is not allowed to do it, AI should not be used for it either.
- **Upload irrelevant data:** This can lead to inaccurate outputs, model biases, or outdated information.
- **Disregard limitations:** AI tools may have ethical, legal, or regulatory constraints and still require human oversight. Contact the AI Risk Review team with any concerns.
